

The State of Utah  
 Department of  
 Natural Resources  
 Division of  
 Oil, Gas & Mining

ROBERT L. MORGAN  
 Executive Director

LOWELL P. BRAXTON  
 Division Director

OLENE S. WALKER  
 Governor

GAYLE F. McKEACHNIE  
 Lieutenant Governor

Representatives Present During the Inspection:	
OGM	Priscilla Burton
OGM	Kevin Lundmark
OGM	Peter Brinton

# Inspection Report

Permit Number:	C0070001
Inspection Type:	PARTIAL
Inspection Date:	Thursday, July 29, 2010
Start Date/Time:	7/29/2010 10:00:00 AM
End Date/Time:	7/29/2010 2:00:00 PM
Last Inspection:	Monday, June 21, 2010

Inspector: Priscilla Burton

Weather: RAIN, 60 F

InspectionID Report Number: 2443

Accepted by: jhelfric  
 8/2/2010

Permittee: **LODESTAR ENERGY INC**  
 Operator:  
 Site: **WHITE OAK MINE**  
 Address: ,  
 County: **CARBON**  
 Permit Type: **PERMANENT COAL PROGRAM**  
 Permit Status: **RECLAIMED**

### Current Acreages

3,906.00	Total Permitted
151.10	Total Disturbed
	Phase I
	Phase II
	Phase III

### Mineral Ownership

- Federal
- State
- County
- Fee
- Other

### Types of Operations

- Underground
- Surface
- Loadout
- Processing
- Reprocessing

### Report summary and status for pending enforcement actions, permit conditions, Division Orders, and amendments:

Visit was made to familiarize Mark Schmitz, DWQ, with the site and discuss biosolids application. Water was flowing in gullies and in the reclaimed channel. The Division took a water sample for analysis.

Inspector's Signature:

*Priscilla Burton*

Priscilla Burton,

Inspector ID Number: 37

Date

Thursday, July 29, 2010

**Note:** This inspection report does not constitute an affidavit of compliance with the regulatory program of the Division of Oil, Gas and Mining.

**REVIEW OF PERMIT, PERFORMANCE STANDARDS PERMIT CONDITION REQUIREMENTS**

1. Substantiate the elements on this inspection by checking the appropriate performance standard.
  - a. For COMPLETE inspections provide narrative justification for any elements not fully inspected unless element is not appropriate to the site, in which case check Not Applicable.
  - b. For PARTIAL inspections check only the elements evaluated.
2. Document any noncompliance situation by reference the NOV issued at the appropriate performance standard listed below.
3. Reference any narratives written in conjunction with this inspection at the appropriate performance standard listed below.
4. Provide a brief status report for all pending enforcement actions, permit conditions, Divison Orders, and amendments.

### **3. Topsoil**

No topsoil at the site and revegetation is meager. Improvements to overburden soils through application of biosolids was discussed with Mark Schmitz. Mark said 15 Metric Tons/ac is routinely applied to corn and 3 MT/ac to winter wheat. Mark said that the PRWID biosolids likely have 1% nitrogen due to their use of facultative drying basins to that allow the ammonium to volatilize. One time applications of up to 5X the agronomic rate for nitrogen are allowed, and this would amount to little more than a light scattering on the ground with biosolids. He said that a one time application more than the agronomic rate could be done on the 28% south facing slope, and would require only a letter of explanation to DWQ. He encouraged us to seek additional sources of biosolids so that the entire south slope could be treated with biosolids. Mark suggested Spanish Fork and Provo treatment plants as sources. Mark will review the PRWID permit for biosolid application requirements. Mark also discussed the contribution of this drainage to the overall condition of Scofield reservoir which is impaired due to high sediment loading. [Subsequent to this inspection, during a conference call on 8/4/2010 with Priscilla, Mark and Bob Brobst of EPA, the application of 20 dry MT biosolids/ac was determined to be acceptable based upon the soils and PRIWID analyses.]

#### **4.c Hydrologic Balance: Other Sediment Control Measures**

Upon arrival at the White Oak site, flow was observed in the Whiskey Creek channel and in numerous gullies on the south facing slope. The water was brown and highly turbid with suspended sediment. In the Whiskey Creek channel, water was observed flowing under torn geofabric. Flows at the site dissipated quickly after the precipitation ceased, and no flow was observed in the channel at the completion of the inspection.

#### **4.d Hydrologic Balance: Water Monitoring**

The Division had planned to collect samples of groundwater discharge in the Whiskey Creek channel to evaluate the potential source of orange staining observed in the channel during a site visit completed June 2010. Heavy rainfall and flow in Whiskey Creek on July 29 precluded collecting representative groundwater seep samples. However, water samples were collected from Whiskey Creek to gain information on water quality during storm flow events. The sample location was directly below the end of the paved access road. Samples were collected and placed in a cooler on ice. Field measurements were: pH = 8.24, temperature = 14.1 C, conductivity = meter error. Samples were submitted to the UT Unified State Lab for analysis of total iron, TDS, TSS and nutrients.

Mark Schmitz collected a sample from Whiskey Creek to provide visual evidence of suspended solids levels in the creek during storm events. No samples were collected by Mr. Schmitz for off-site analysis.

Permit Number: C0070001  
Inspection Type: PARTIAL  
Inspection Date: Thursday, July 29, 2010

**14. Subsidence Control**

Sinkholes previously identified at the site and associated with sealed portals were holding pooled rainwater.
