**Subject:** White Oak/Whiskey Creek Reclamation Update

Milton A. Oman Trust, LTD  
c/o Darin Caine

Hello Darin,

The Division of Oil Gas and Mining recently contracted with an engineering firm to generate an up-to-date contour map of the White Oak/Whiskey Creek reclaimed site using aerial photography. I have been able to work with the contour information to develop preliminary designs for site stabilization and channel restoration. I am interested in any input, questions or concerns you may have. Addressing any issues would be simplest while the project is still in the engineering and designing stages. Division staff will be conducting a site visit to attain additional information that will be useful for design considerations. The site visit will be scheduled as soon as site weather/snow-melt conditions allow. Once the designs are finalized and approved, the project will likely go out to bid. We hope to begin construction during the 2010 field season.

Thanks,

James C. Owen
