Hello Darin,

The crew worked over the weekend to get the site buttoned up before the storm hit Monday. Here's a photo of the site last Sunday, before the storms. Green area has been hydroseeded. Darker area in center treated with biosolids. Rock Chucker throwing biosolids on lower terrace. Excavator gathering piles of rock on lowest area of disturbance in photo.

The contractor put a series of water bars across all roads before leaving. The contractor has moved all equipment down to the Eccles Hwy location. There was 4 inches of snow at the site on Tuesday. The site will be inaccessible to large equipment until early summer. Would you like to walk the site?
Priscilla.

Ms. Burton, I have been down to check the reclamation a few times and saw the site again yesterday and I believe they are doing a good job thus far. The work is to a point now that I would like to meet on site to discuss roads, berms, terraces etc.

Let me know a good day,
Thanks, Darin
