### **3. Topsoil**

The east face of the topsoil stockpile is superficially covered with gravels from plowing the RR right of way. The pile is well vegetated. Approximate pile dimensions are 7 ft high X 15 ft. wide X 175 ft. long. Estimated volume is 340 cu yds.

#### **4.a Hydrologic Balance: Diversions**

Culverts are shown on Dwg R645-301-527 Sheet 2. All culverts can pass water. Two culverts at the site are rusted through or have been torn along their length and now are collecting debris inside the culvert. One of these, culvert C-14-42 carries a steady flow beneath the RR tracks to Mud Creek and is a potential hazard. Maintenance should be addressed by OGM and the RR. The second torn culvert C-4-42 is further north and does not carry a constant flow, but also passes underneath the RR tracks to direct flow to the sediment pond. A partially clogged culvert C-7-24 passes underneath the north RR access road.

#### **9. Protection of Fish, Wildlife and Related Environmental Issues**

Whiskey Creek confluence with Eccles is not noticeably different in color or turbidity than Eccles Creek.
