

April 23, 1979

Memo to File:

RE: American Electric Power

Lee McCloskey and Don Stevens called Mike Thompson on the morning of Monday, April 23, 1979, concerning the drilling of the proposed ventilation shafts. The proposed shaft location for the Number 5 Mine has been relocated from the Right Fork to approximately 4,000 feet up the West Fork of Sowbelly, again on Fee Land. The two shafts will be raise bored from underground, so that cuttings disposal can be taken care of in the mine. The original proposal was to drill the shafts from the surface.

Water monitoring well locations will be located accordingly.

Plans will be delivered on Tuesday morning.

K. MICHAEL THOMPSON  
ENGINEERING GEOLOGIST
