REVIEW OF PERMIT, PERFORMANCE STANDARDS & PERMIT CONDITION REQUIREMENTS

Instructions

1. Substantiate the elements on this inspection by checking the appropriate performance standard.
 - a. For complete inspections provide narrative justification for any elements not fully inspected unless element is not appropriate to the site, in which case check N/A.
 - b. For partial inspections check only the elements evaluated.
2. Document any noncompliance situation by referencing the NOV issued at the appropriate performance standard listed below.
3. Reference any narratives written in conjunction with this inspection at the appropriate performance standard listed below.
4. Provide a brief status report for all pending enforcement actions, permit conditions, Division Orders, and amendments.

PERMIT NUMBER: ACT/007/005

DATE OF INSPECTION: 9/21/99

(Comments are Numbered to Correspond with Topics Listed Above)

1. PERMIT -

The permittee has an amendment being reviewed by the Division in Salt Lake regarding the removal of silt fences along the belt convey. Presently, these are alternate sediment control areas. The permittee has demonstrated these areas as small area exemptions.

2. SIGNS AND MARKERS -

Identification signs meet the requirements of the R645 Coal Rules. The perimeter markers were spot-checked and are located around the perimeter of the disturbed areas.

3. TOPSOIL -

The topsoil piles were inspected with no signs of wind or water erosion. These piles are protected by vegetation, straw bales, and/or silt fences.

4A. DIVERSIONS -

The diversions were spot-checked and were found to comply with the requirements of the Mining and Reclamation Plan and the R645 Coal Rules performance standards. Several of the diversions will need maintenance work. Sediment from the recent rain storms have started to build up within the ditches.

4B. SEDIMENT PONDS -

There were no signs of any hazardous conditions occurring to the sediment ponds during the inspection.

The sediment pond at the waste rock site will be cleaned out due to recent rain storms causing an increase in material going into the pond.

4C. OTHER SEDIMENT CONTROL MEASURES -

Skyline Mine uses straw bales, silt fences, gravel, and berms as its alternate sediment control measures. These areas were spot-inspected and complied with the R645 Coal Rules. Spot checks of these areas were made and no performance standards were violated. But, maintenance will be needed in several areas at the waste rock site due to cows destroying several straw bales.

The permittee had an emulsion spill on the longwall this week. No oil from the spill has entered into Eccles Creek. The permittee received permission to pump the contaminated water into the old mine works.

5. EXPLOSIVES -

No explosives were used since the last inspection.

7. REFUSE PILE -

Refuse has been added to the pile since the last inspection.

8. NON-COAL WASTE -

The area was clear of non-coal waste material.

18. SUPPORT FACILITIES -

There were no additional support facilities constructed.
