Subject: Water Monitoring Report

Pam:

Canyon Fuel Company, LLC has recently completed the upload of 2nd quarter 2000 water monitoring data for the Skyline Mine to the Division's EDI system. I believe we have managed to get all the required and pertinent data submitted to the Division to satisfy our monitoring requirements. It is important to note that water levels dropped several feet in ground water wells W79-35-1A and W79-26-1. These wells are located in areas of longwall mining that occurred in the months preceding June 2000. Subsequent measurements taken in July 2000 as part of the 3rd quarter water monitoring seem to indicate the water levels are slowly recovering. We will keep an eye on those two wells. Fortunately, the wells are completed in aquifers that do not discharge to the surface as springs.

If you have any questions regarding the submitted data, please call me and we can hopefully solve the problem.

Chris Hansen
