Subject: November Water discharge data

I have attached a partial record of the November discharge records for Skyline Mine. The mine discharge to Eccles Creek is missing but I should be able to upload that tomorrow. The approximate flow rate for the water discharging from the mine to Eccles Creek is 3550 gpm. This may vary both higher and lower by up to 500 gpm. I have the average flows through the day before Thanksgiving but do not yet have the remaining 6 days of the month. I thought I would update the file completely tomorrow and submit.

Chris
