## Technical Analysis and Findings Utah Coal Regulatory Program

**PID:** C0070005  
**TaskID:** 4411  
**Mine Name:** SKYLINE MINE  
**Title:** SILT FENCE REMOVAL

### Operation Plan

#### Hydrologic Siltation General

##### *Analysis:*

On October 15, 2013 the Division received an modification to Plate 3.2.1-3 of the Skyline MRP. This is a plate showing the drainage and permit boundaries of the Skyline loadout facilities.  
The modification request is to remove silt fences that are considered non-essential following an inspection by Karl Housekeeper.  
The silt fences to the North of the loadout building do not currently receive runoff, and for the area to the South of the loadout facility, the area is treated by ASCA area 19. The ASCA area is paved in concrete and asphalt, and due to the small surface area, this runoff reports to and is addressed by a graveled area.  
These silt fences were placed without any real need for them, and it is recommended that the amendment be approved.
