RE: Amended 1984 Annual Reclamation Report

Dear Lynn:

The attached 1984 Reclamation Report submitted in December, 1984 has been amended to show additional comparative data for the Refuse Pile Study. This data is presented in an addendum at the back of the report. It contains comparisons from the 1984 research data as requested in the Divisions April 18, 1985 letter. Comparisons were made using a two-tailed t-test to determine statistically significant differences between 100 and 200 pounds per acre fertilizer subplots on each of the soil material depth treatments. These data represent plant growth expressed as cover and production for the second year after fertilization.

Sincerely,

  
Ben Grimes  
Environmental Coordinator
