INSPECTION REPORT COMMENTS

Permit No. Act 007/006

Inspection Date 5/5/93

Please number comments to correspond with topics on previous page.

General Comments The instant inspection concentrated on the underground operations. The operator was in the final stages of removing the longwall. Small quantities of emulsion fluids were observed adjacent to the longwall. No hose leaks were observed. It appears the operation as related to emulsion operation is within acceptable standards. The emulsion fluid is mixed underground.

Signs & Markers The perimeter markers at the corner canyon site need to be painted. This was discussed with Mr. Grimes and he said they would be painted.

Other Sediment Control The corner canyon fan breakout is an approved BTCA area. The on site environmental controls include a berm and a check dam at the upper site and a berm at the lower site.

Roads The main access road to the mine site showed recent evidence of maintenance. Some rocks are still falling in the drain ditch, but at this time are not a compliance problem.

Other The operator briefed the state officials on the federal lease and mining sequence caused by a change of plans.
