Subject: Re: Star Point Mine - C/007/006 Subsidence Issue

Dennis,

Thank you Dennis for your emailed reply. I asked Dave to followup with you on this because it has been carried over as an agenda item on our monthly interagency conference calls for some time now. Tom Lloyd of USFS originally requested it be listed and has asked if plans have been received. I'll forward this response to Tom and we'll look forward to the receipt of your formalized plan for the repairs hopefully in early 2007.

Thanks again,

Wayne Hedberg

Wayne,

In response to a request from Dave Darby I am hereby providing you with the status of the subsidence crack repairs that has yet to be accomplished under the Star Point Mine permit on Gentry Mountain.

It is the intent of the Permittee to repair the crack in question in the spring or summer of 2007. The Permittee visited the site of the crack with the Forest Service and jointly determined that the crack has, for the most part, self healed, however, additional work is necessary. This additional work will be preformed by using the native material in the general area of the crack to fill in the remaining voids. In addition, safety fence that currently surrounds the crack will be removed and the disturbed area will be seeded. All of this work will be done by hand as equipment access would require a significant amount of disturbance. It is my understanding that I must prepare a subsidence repair plan and submit it to the Division for approval before proceeding with the work. If you have any questions please do not hesitate to contact me.

Dennis Ware
