Re: Sunnyside Mines Act/007/007
(42-000-94) Violation
#N79-5-3-41

Dear Larry:

Violations #2 and #3 have been abated as of 3 p.m.,
December 13, 1979.

Enclosed is a topo map showing the locations of the straw
dams. All the surface drainage from the berms, roads in the
area and coarse refuse pile passes through the straw sedimenta-
tion barriers. It is my understanding that this now abates
violation #2.

The smoke plumes and the ignited waste material has been
extinguished by covering the whole area along the west bank of
our tailings pond with 4 ft thick of loam soil material. This
abates violation #3.

Kaiser Steel Corporation has ceased disposing metal and
other waste in the unauthorized location. We are in the process
of preparing plans and submittal information to request this
area to be an approved Metal Waste Disposal area to satisfy
violation #1.

Sincerely,

John Huefner
