RE: Icelander Wash Pond Reclamation
Plans

Dear Mr. Lof:

The Iceland Wash Pond located adjacent to the Railcut Pond is full of sediment and the spillway eroding. To prevent further erosion the structure will be reclaimed by routing the drainage back into the original channel, recontouring the surface, and planting the disturbed area.

The area to be reclaimed is less than 0.5 acres. The pond will be recontoured with a D8-CAT and a front end loader. The surface will be scarified with a motor grader after recontouring.

The site will be reclaimed to PJ/G using the seed mix found on Table III-7 of the MRP. Techniques that will be used in the revegetation are found in Section 3.5.5 of the MRP. Revegetation will take place before October 30, 1985.

Sincerely yours,

Douglas C Pearce
