JIM

JUN 14 1982

Memorandum

To: Utah State Coordinator, Office of
Surface Mining (OSM), Denver

From: District Mining Supervisor, Minerals
Management Service (MMS), Salt Lake City

Subject: Eureka Energy Company, Sage Point-Dugout
Canyon Project, Carbon County, Utah,
Mining and Reclamation Plan

Information transmitted with your form letter dated April 26, 1982, has been reviewed for completeness and technical adequacy relating to responsibilities of the Minerals Management Service. The information is the last response by Eureka Energy Company to the DOGM letter dated February 4, 1982, requesting additional information required from their technical review of the subject plan. The information related to water and wastewater systems for the subject plan does not contain anything that would require action by the MMS. Accordingly, we have no comments on this information.

The total plan complies with 30 CFR 211 regulations and shows that maximum economic recovery (MER) will be achieved. In our review letter dated September 18, 1981, we requested that the final approval include a stipulation relative to final abandonment. Please refer to this letter for our requirements for this stipulation.
