Inspection Memo
to Coal File

RE: Drill Site B3
Blazon Mine
Blazon Coal Company
CEP/007/009
Carbon County, Utah

Drill site B3 was inspected by Sandy Pruitt on July 7, 1983. Drilling was completed in December 1982. The drill hole was adequately plugged with cement and marked but the drill site had not yet been recontoured for reclamation. Although the drill site itself is sufficiently dry the access road was still muddy. Due to sloughage onto the road and slumpage in the road itself, access would need to be reestablished for travel by heavy equipment. As conditions were too wet for the required reclamation work another inspection will be conducted later this season.
