RE: King #6 Mine Portal  
Addition to Mining & Reclamation  
Plan ACT/007/011

Dear Ron,

This letter is submitted in response to stipulations presented in your approval letter of July 9, 1979 for the King #6 Mine portals in the left fork of Miller Creek.

We have a copy of OSM's response to your letter (July 25, 1979) and your reply to their request for additional information (August 2, 1979).

The following information is submitted to supplement our plan.

1. Sediment control structures will be installed prior to constructing portal facilities. Plans for such structures have been submitted and are pending approval from your division.
2. Some surface facilities are already existing. Additional surface facilities, other than sediment control structures, will be confined to the existing mine yard area.
3. Waste rock derived from excavating the portal face-up areas will be deposited in low points in the existing mine yard and used to build up and level a portion of the yard. See enclosed map.

Yours truly,

*Robert Eccli*

Robert Eccli,  
Mine Engineer
