Re: Air Quality Approval Order  
for U.S. Fuel Company to  
Construct and Operate Coal  
Handling Activities for King VI  
Mine

Dear Mr. Jahne:

On April 19, 1981 the Executive Secretary published a notice of intent to approve U.S. Fuel Company's overland conveyor and associated surface coal handling activities for the King VI Coal Mine near Hiawatha. The 30-day public comment period expired May 18, 1981 and no comments were received.

This air quality approval order authorizes the construction and operation of the conveyor and other surface handling functions as proposed in the notice of intent dated March 20, 1981 and corrected on April 2, 1981 with the following conditions:

1. Overland conveyor from King VI coal portal shall be covered and be constructed as proposed.
2. The overland conveyor transfer points shall be enclosed.
3. The coal from the overland conveyor system and associated stock pile in South Fork Canyon shall be moved from pile via ground level vibrating feed to a covered conveyor to the truck loadout equipped with a flexible head chute to minimize fall distance into trucks.
4. The haul road from the portal to Hiawatha tippie shall be paved as proposed.
5. The operational and storage areas associated with the handling of the King VI tonnage at the Hiawatha tippie shall be water sprayed or chemically stabilized as dry conditions warrant to minimize fugitive dusts. A record/log shall be maintained of the treatments to include dates, amounts and areas and be made available to the Executive Secretary upon request.

Page 2

6. The Executive Secretary shall be notified when the overland conveyor system and paving are completed as an initial compliance inspection is required.

Sincerely,

Brent C. Bradford  
Executive Secretary  
Utah Air Conservation Committee
