Mr. Robert Eccli  
Senior Mining Engineer  
U. S. Fuel Company  
Hiawatha, Utah 84527

Dear Mr. Eccli:

RE: Approval of U. S. Fuel Company's Abatement Plans for NOV  
N84-8-1-3, #2 of 3, ACT/007/011, Folder No. 4 and 7, Carbon  
County, Utah

The ABATEMENT plans submitted by U. S. Fuel Company on November 8, 1984 FOR NOTICE OF VIOLATION (NOV) N84-8-1-3, 2 of 3 have been reviewed by the Division. The proposed plans are acceptable and approval is hereby granted by the Division to proceed with construction.

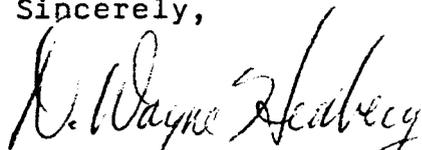

The plans must be implemented by December 23, 1984. Any extension requests must be received and approved prior to the implementation deadline.

The Division requests U.S. Fuel Company to incorporate this approved information into its Mining and Reclamation Plan. The company should contact the OSM (Ron Naten) for a determination as to whether this information must be included as part of their ongoing review of the Permit Application Package (PAP).

Senior Mining Engineer  
United States Fuel Company  
Hiawatha, Utah 84527

Dear Mr. Eccli:

RE: Request to Postpone Channel Riprap Implementation, North Fork Diversion Emergency Spillway, Notice of Violation N84-8-1-3, #3 of 3, Hiawatha Complex, ACT/007/011, #4 and #7, Carbon County, Utah

The Division has received U. S. Fuel Company's letter dated November 6, 1984 which expresses the company's concern regarding implementation of the approved abatement plans for the North Fork diversion emergency spillway.

The company has requested an extension of time to complete the implementation of the abatement plans for this Notice of Violation (NOV) until the spring of 1985. The operator has experienced problems with access to the site with heavy equipment due to the accumulation of excessive snow depths and with mud on the last half mile of the road from the stream crossing to the site. Attempts by the operator to haul riprap to the site under these conditions are not feasible at this time.

The operator has committed to make an additional attempt to access the site, if the weather turns cold enough to freeze the ground making access somewhat more feasible for the heavy equipment.

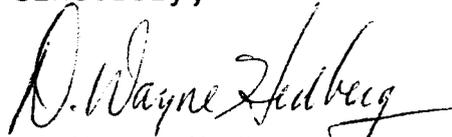

The Division recognizes the problems associated with construction at this time of the year and hereby approves the company's request to postpone completion of this project until next spring. Plans must be implemented on or before May 1, 1985 (as soon as field conditions warrant. To avoid a potential violation situation, the operator must contact the Division via a written notice prior to the May 1, 1985 deadline, should it appear this deadline cannot be met.

Prior to commencing construction of the same, please notify the Inspection and Enforcement staff for an on-site field check.

RE: NOV # 84-8-1-3, # 3963  
(?)

Dear Mr. Hedberg;

This letter is to inform you of our concern regarding implementation of plans for the North Fork diversion emergency spillway.

We had intended to begin construction on this project on Monday, November, 5. We directed our heavy equipment contractor to begin tramming a backhoe to the site that morning. After driving to the site with the contractor in a four wheel drive vehicle it was felt that due to the road condition it would be best not to try to haul riprap to the site. The road is difficult for large trucks even in dry weather. The project site is covered with about 6" of snow and the last half mile of road from the stream crossing to the site alternates between sections of mud and snow. Attempting to haul riprap to the site under these conditions could be quite dangerous.

If the weather should get colder without additional snowfall, it might be possible to chain the dump trucks and try to get in on frozen ground.

If conditions do not improve, then we wish to request postponement of this project until next spring.

Sincerely,

Robert Eccli  
Sr. Mine Engineer

Dear Ms. Semborski:

RE: Final Approval of Discharge-Filter Structures for the Middle Fork  
Timber Yard Berm, Notice of Violation N84-4-8-8, #4 of 8, U. S.  
Fuel Company, Hiawatha Complex, TACT/007/011, #4 and #7, Carbon  
County, Utah

The Division has received your November 7, 1984 response which addresses the remaining deficiencies for Notice of Violation (NOV) N84-4-8-8, #4 of 8. The plans have been reviewed by Division Hydrologist Tom Munson. The level of detail provided answers concerns regarding construction of these discharge-filter structures. These measures will provide a good means of treating drainage on-site. The choice of a fabric filter face on the structure should provide the necessary filtration to allow the operator to meet effluent limitations.

Thank you for providing adequate sediment control protection for these areas. Any concerns or questions, please feel free to contact us.

Sincerely,

D. Wayne Hedberg  
Permit Supervisor/  
Reclamation Hydrologist

RE: Request for Approval of Quarterly Monitoring Schedule for  
Sediment Ponds, U. S. Fuel Company, Hiawatha Complex,  
ACT/007/011, #3, #4 and #7, Carbon County, Utah

The Division offers the following response to your letter of July 13, 1984 requesting a quarterly sediment pond inspection.

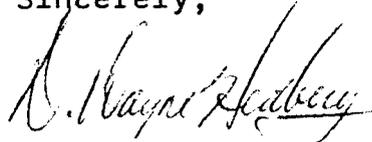

Staff inspectors have indicated that as a result of past site inspections, a series of documented violations and inadequacies has occurred associated with some of the sediment ponds. It is the Division's opinion that these problems could have been averted had proper inspection procedures been enacted by the operator. Since there is a particular concern with certain ponds which impound water following storm events, some conditions must be applied to the Company's request.

Three of the sediment ponds must remain on the current weekly inspection schedule. These ponds are the Middle Fork Mine Yard, the South Fork Loadout and the South Fork Mine Yard Ponds. The Division grants the operator's request to allow the remainder of the sediment ponds to go to a quarterly inspection schedule.

Memorandum

To: Utah Senior Project Manager, OSM, Denver

Attn: Ms. Sarah Branson

From: Chief, Branch of Mining Law and Solid Minerals  
BLM-SO, Salt Lake City, Utah

Subject: United States Fuel Company, Hiawatha Complex, Carbon and Emery  
Counties, Utah, Permit Application Package (PAP)

The Resource Recovery and Protection Plan (R.P.) or underground mining part of the subject PAP was considered adequate for BLM administration of the associated Federal coal leases. Our memorandum dated May 8, 1984, stated that the R.P. on file in this office is compatible with 43 CFR 3482.1(c) rules and regulations, and that the proposed coal recovery procedures will safely obtain maximum economic recovery of the coal resource within the plan area by following the planned technology and by using the types of equipment listed in the plan. Since that time we have received the following information and data:

1. Three maps forwarded with your letter dated June 11, 1984, and identified as "05/14/84 submittal of revisions for mining and reclamation plan, Exhibits XIII-2c, 2d, and 3e."
2. Maps and pages forwarded with your letter dated June 11, 1984, and identified as "05/17/84 submittal of revisions for MRP in response to OSM determination of adequacy letter of 05/01/84."
3. Maps and pages forwarded with your letter dated June 11, 1984, and identified as "06/01/84 submittal of additional information on proposed unit train loadout in response to OSM letter of 05/01/84."
4. Pages forwarded with your letter dated June 25, 1984, and identified as "Plan of action for evaluation of underground reservoir, June 15, 1984."
5. A page forwarded with your letter dated July 2, 1984, and identified as "06/07/84 submittal of revisions for mining and reclamation plan regarding road maintenance."

We have reviewed the supplemental information and data listed above and have determined there are no conflicts with the planned coal recovery procedures or with future recovery of coal resources.

Within the limits of our authority we concur with the Hiawatha mine complex R<sub>2</sub>P<sub>2</sub> plan on file in this office as amended and recommend that it be included<sup>2</sup> as an integral part of the subject PAP.

ATTENTION: Ms. Jean Semborski

RE: Conditional Approval  
Middle Fork Breakout  
Emergency Ventilation  
Hiawatha Mine Complex  
ACT/007/011  
Folder Nos. 3 and 4  
Carbon County, Utah

Dear Mr. Gardiner:

The Division has completed the review of U. S. Fuel Company's recent request for approval for an emergency ventilation breakout at the Middle Fork mine yard. Notice was received via letter from Ms. Jean Semborski on December 15, 1983.

The Office of Surface Mining (OSM) was contacted prior to initiation of the Division's review to solicit their comments and proper procedure for approval. Comments were received from the OSM on January 20, 1984 and are included in this response.

The Division is cognizant of the present emergency status of this request and to the extenuating safety and economic circumstances which have become a critical concern to U. S. Fuel Company in sustaining current production and operational status.

Mr. Errol Gardiner  
ACT/007/011  
January 25, 1984  
Page 2

Division approval is hereby issued to U. S. Fuel Company to proceed with the breakout provided the following stipulations are adhered to:

1. The spatial constraints of the breakout will be limited to the ten (10) foot by twenty (20) foot areal extent proposed in U. S. Fuel Company's letter of December 13, 1983.
2. All surficial debris covering the coal outcrop will be taken into the mine and not be cast downslope.
3. No face up, pad development or associated construction work will be performed prior to the final review and approval of the entire modification and/or mining and reclamation permit application.
4. Every attempt should be made by the operator, to the extent physically possible, to salvage and stockpile any topsoil (or suitable plant growth medium) that is available from the ventilation breakout activity.

The current interim surety of \$1,450,000 on file with the Division will be adequate to cover the emergency breakout. Final adjustment of the bond to cover the entire breakout will occur as part of the ongoing MRP permit application review.

These stipulations must be accepted in writing by U. S. Fuel Company and received by the Division prior to the actual breakout occurring at the minesite.

In addition, the following preliminary deficiencies have been identified as outstanding concerns which must be addressed by the operator prior to final approval of the breakout/conveyor proposal as a whole. These review comments are not all inclusive at this point of time, as more will probably be forwarded to the operator when the OSM review of the latest Determination of Completeness response document is finalized.

UMC 784.13(b)(2)(8) Operation Plan: General Requirements

(b)(2)(8) The current bond must be adjusted to cover the additional proposed disturbance (0.47 acres) and the sealing costs for the portal. What type of seal will be used? Is a hydrostatic head anticipated that would influence the type of seal used? The cost estimate should reflect the specific designs necessary to adequately secure the portal(s).

UMC 817.21-.22 Topsoil: General Requirements, Removal

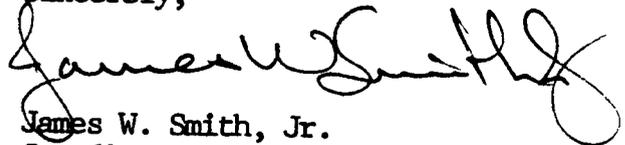

The operator's proposal for topsoil removal and storage are not in compliance with UMC 817.21 and 817.22. The operator must address the following requirements:

Mr. Errol Gardiner  
ACT/007/011  
January 25, 1984  
Page 3

1. The operator has indicated on page 2 of its August 30, 1983 letter to the Division that surficial soil veneer will be removed to a depth of 1.5 feet and stockpiled at a specified site (Exhibit VIII-4, August 27, 1983). Depth of removal will fluctuate depending on configuration of underlying bedrock.
  - (a) The location(s) of soil sampling sites must be identified on a map.
  - (b) Soil sampling procedures must be described.
  - (c) Suitability criteria used to assess the proposed topsoil material must be provided.
2. All suitable topsoil material must be removed and stockpiled for the following reasons: (1) soil thickness fluctuates with depth to bedrock (generally < three feet) and a topsoil removal depth of 1.5 feet over the entire disturbance area may not be possible; and (2) the high percentage of coarse material (> two mm) in the soil (laboratory analyses) requires a maximum thickness of redistribution to enhance moisture and nutrient retention important to the success of revegetation.
3. An estimate of the volume of suitable topsoil material based on the correct acreage figure for the disturbance area and a calculated mean depth of topsoil removal must be provided.

Should questions arise, please contact me or D. Wayne Hedberg at your earliest convenience.

Sincerely,

James W. Smith, Jr.  
Coordinator of Mined  
Land Development
