RE: Mine Sequence Change, Hiawatha Mine Complex King VI Mine,
ACT/007/011, Folder No. 3, Carbon County, Utah

Summary and Conclusion

U S Fuels Company has submitted a mine change modification which supercedes their mine plan change March 11, 1986. This change gives easier access to major coal reserves. The Bureau of Land Management is requiring the new West Mains be columnized as close as possible with the old "A" seam workings 28 to 40 feet above the Hiawatha Seam.

A review of the plans indicate no additional adverse effects in excess of the original mine plan. Approval of these plans is recommended based on the information received.

Recommendations

The applicant should submit a new mining sequence map outlining the dates that mining will be conducted.
