DIVISION OF
OIL, GAS & MINING

Dear Mr. Darby;

Included for your personnel information are the maps you requested:

MAPS 1, 2, 3

Show separately the mine workings in the three mineable seams on the southern part of the property (King 6 area).

MAP 4

Shows the overburden to the B seam for the northern reserves (King 4 area).

MAP 5, 6

Show the A-B seam interburden and A seam thickness isopachs. Notice the mineable (greater than 5 foot) A seam lies east of our 8 North section.

MAP 7

Shows the projected Hiawatha seam development in the King 6 area. The rate of production from this mine will be based upon current and future contractual requirement.

Hopefully these maps will help you understand the somewhat complex seam relationships at Hiawatha. Further, no multiple seam mining is projected in the 12 West area. Multiple seam mining in King 4 will most likely be east of the 8 North section and north of the 11 East section after the A seam has been accessed. Currently, the King 4 workings are almost exclusively in the B seam.

Mr. Dave Darby

These maps are not intended as permit submittals but are submitted at your request to enhance your understanding of the property. Several of the maps are marked "Confidential" due to the interpretive information they contain; please treat them accordingly. We pride ourselves on being a cooperative company and were somewhat taken aback at the circumventive methods used to try to obtain this information which we are readily submitting. In the future, please call us first directly and I think you will find U.S. Fuel Co. easy to deal with.

If you have any questions, please call.

Sincerely,

Michael P. Watson
Manager of Technical Services
