## DIVISION OF OIL GAS & MINING FIELD VISIT FORM TECHNICAL

**Date :** September 25, 1996  
**Time:** 9:00 a.m. to 1:00 p.m.  
**Mine:** Hiawatha Mine  
**File Number:** ACT/007/011 Folder #2  
**DOGM Staff:** Robert Davidson and Paul Baker  
**Other Attendees:** Dan Guy - Blackhawk Engineering

**Purpose:**  
Sample newly exposed refuse material on regraded areas on Pond #5.

**Observations:**  
The surface of Slurry Pond #5 has been graded at a 5:1 slope.

**Recommendations/Conclusions:**  
Since the surface of Slurry Pond #5 has been altered appreciably since the MRP was originally approved, additional sampling of the newly disturbed surface material is required to ascertain toxic and acid forming properties before reclamation proceeds.

Three samples were taken on an east-west transect going down the regraded slope and included a top, middle and bottom sample. Three auger cores were blended together at each site. The three composite samples were placed in individual ziplock bags and shipped for laboratory analysis.

Signature:  on September 30, 1996  
Robert A. Davidson, Reclamation Specialist II (Soils)
