Subject: Re: Hiawatha Annual Report

Please let me know for sure on Monday. Thank you.

Olympus Aerial was going to give us the subsidence data from their aerial survey today, but they just told us they are having problems with finding the controls. We can submit the report and only include the data from the points we surveyed with a single station, but Charles feels like we should ask for another extension and wait until we have the full survey. Olympus will be calling Monday to give us another date.

If you want us to submit now and only include the data we have let me know, if not can we extend the date until May 30. It will probably be sooner, but until Monday I will not know for sure.
