**Subject:** Hiawatha Samples

I have ok'd all of the data for Hiawatha. I noticed that sarah submited a sample for 9-9-2003 for D002 that was No Flow. During this time we were installing a new pipeline and only 17 gpm was being diverted to Hiawatha for culinary use throught a temporary pipline. The main pipeline was completed September 15th at we started diverting over 100 gpm. So the site was no flow on the 9th when she checked it, but it was not no flow for the entire month. I don't know if we need to worry about this or not. Can you please let me know.
