**Attachments:** Hiawatha phase one bond release app # 2895

Comrades,

attached is Joe's email for the Hiawatha Phase I bond release. The Permittee did not include any vegetation information. Since Phase I bond release does not include vegetation requirements the lack of information is not a deficiency.

Angela, please send a copy of the emails to file.

Wayne,

I've reviewed the application and there is no information regarding seed mixes, rates of application, revegetation timing and techniques. This is not unusual as Phase one primarily deals with backfilling and grading and a few bond calculations. The sites however have been reclaimed and seeded some time ago, so it not might be a bad idea to evaluate the area in terms of veg success, stability and erosion control during the bond release inspection, your call.....Joe
