Memo to Coal File:

RE: U. S. Steel Coporation
Wellington Prep Plant
ACT/007/012
Folders 3, 4 and ⑦
Carbon County, Utah

On January 11, 1984 I talked with Mr. Randy Watts of U. S. Steel regarding Stipulation 9-29-83-1-TP which was attached to the approval of the Wellington Refuse Pond Revision (Technical Revision #1).

It seems this stipulation is rather antiquated due to improvements in the overall ORP. These supercede the soil volumetrics concern encompassed by the stipulation in question.

More specifically, soil borrow areas have been proposed which appear adequate to effect reclamation of the disturbed area and ease the deficit soil balance. This coupled with the permanent nature of the embankment render the future use of soils in the embankment moot.

Inspection and technical staff should consider stipulation 9-29-83-1-TP to be without effect in the future.
