October 17, 1989

TO: Sue Linner, Permit Supervisor

FROM: Rick Summers, Reclamation Hydrologist *RS*

RE: Wellington Preparation Plant Loadout, Received, October 13, 1989, Genwal Coal Company, ACT/007/012, Folder #2, Carbon County, Utah.

SUMMARY:

The permit application package is approvable at this time with the following condition:

Condition #1: The applicant must incorporate the items discussed between myself and Brad Paul on 10-17-89 prior to 10/25/89. These items are as follows:

1. Topsoil stockpiles must be identified as small area exemptions.
2. The permit must incorporate a narrative of the small area exemptions for the site, including treatment structures/measures to be used to control drainage.
3. Details of the UD-1A spreader structure to be used for energy dissipation.
4. Revisions (as field checked) of the watershed for UD-1A.
5. General editing comments: cross-sections A-A and B-B, label DD-4 on map 10, correct stream lines for accuracy, P. 39 discrepancy on refuse acres, culvert design headings.

The construction of UD-1A cannot commence until item #4 above has been submitted and the operator has received written approval.

Wellington Preparation Plant Loadout
ACT/007/012

The designs for the hydrologic structures were based and verified on storm events of 6 hours in duration, rather than the 24 hours of our current rules (supervisor direction). The 6 hours storm design is consistent with the Division's proposed rules and current CFR regulations.
