Sterling Stoddard  
Coal Systems, Inc.  
P.O. Box 17117  
Salt Lake City, Utah 84117

Dear Mr. Stoddard:

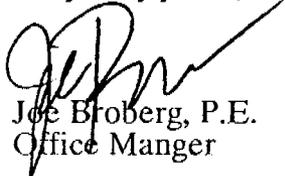

I enjoyed the opportunity to find out a little about Coal Systems, Inc. during our phone conversation today. I wish we had the well construction records you are looking for, but I think the records we used were either returned to USX or were stored or destroyed when our Denver office moved.

We established our Salt Lake City office earlier this spring to serve our Utah clients better. We noticed a gradual change in Utah environmental regulation over the last few years and it became obvious last year that Utah permitting and regulatory liaison work would best be done from a Salt Lake City office.

Engineering-Science, Inc. can provide virtually any kind of environmental engineering and science support you may need through our office here in Salt Lake City. Our local staff includes hydrogeologists and environmental engineers who have extensive experience in the environmental aspects of mining, metals refining, manufacturing, and hazardous waste management. We can also provide the specialized services of 1,200 other employees working for Engineering-Science, Inc. in our other 29 offices, and additional 7,000 employees working for the other 10 engineering companies affiliated with Engineering-Science, Inc. through our parent company, The Parsons Corporation. Two of those companies, The Ralph M. Parsons Company and DeLeuw Cather and Company also have offices in Salt Lake City. When needed, we can draw on the local production capabilities of our sister companies to turn out a lot of work in a short period of time.

Engineering-Science, Inc. would be very interested in proposing on environmental work that you may have coming up. I think you will find that Engineering-Science, Inc. offers the personalized service that is typically associated with smaller firms, but also offers the great depth of talent and fast response that the resources of a larger firm make possible.

Very truly yours,

Joe Broberg, P.E.  
Office Manger
