Hello Erik,

I just wanted to notify you that I have made the changes to the water database parameter requirements as specified in the Wellington MRP that resulted from the midterm review.

GW-12 is no longer an active monitoring well

All pH (Lab) and Specific Conductivity (Lab) parameters have been removed from the active well and surface water locations.

Thanks and let me know if you see anything a bit out of sorts with the database as you are entering data. I think I covered my bases, but if not let me know!!

Hope you are surviving the inversion with lots of field trips to Southern Utah!

Regards,

April
