Hi Erik,

Historically, baseline sampling occurred during the 1st quarter of the permit renewal year. However; we talked about this a while ago and decided that baseline data would be more meaningful if collected during late 2nd quarter or 3rd quarter.

According to my notes, baseline sampling needs to be done this year (i.e. before the end of the month).

Let me know if you have questions.

Regards,
Steve

Hi Steve,

How are things? I have been working on the Wellington MRP revisions and I noticed that the plan specifies that "Baseline parameters will be collected the year prior to the five year permit renewal." It seems like we just got through with the mid-term review? Do you know when the year prior to the five year renewal would be? I'm assuming that we would do it during low-flow conditions in the 3rd or 4th quarter of whatever year that is. Do you have any thoughts?

Thanks Steve, Here's hoping you're having a fabulous day!

Erik
