Subject: Revise Sediment Control Methods, Wellington Prep Plant, Price River Terminal, LLC, C/007/0012, Task ID #4656

Dear Mr. Collins:

The Division of Oil, Gas and Mining (the Division) has completed its review of the proposed revision to the various sediment control measures at the Wellington Prep Plant. The Division has identified deficiencies that must be addressed prior to final approval. The deficiencies are listed as an attachment to this letter.

Please submit a response to the deficiencies by November 6th, 2014. If you have any questions, please feel free to contact Daron Haddock (801) 538-5325 or myself (801) 538-5350.

Sincerely,

Steve Christensen
Permit Supervisor

Title: REVISE SEDIMENT CONTROL METHODS

Operation Plan

Hydrologic Sediment Control Measures

Deficiencies Details:

R645-301-752: The amendment does not meet the State of Utah R645 requirements for sediment control measures. For purposes of inspection, the Permittee must provide a detailed design/installation drawing for the proposed erosion control waddles. Design/installation drawings have already been approved for the silt fences and straw bales.

Additionally, please provide a commitment in section 7.52 of the Mining and Reclamation Plan (MRP) relative to the maintenance of the various sediment control measures (i.e. inspected and cleaned-out/repared following a rainfall event(s), at no time allowed to fall into disrepair that renders them ineffective in preventing additional contributions of suspended solids to stream flow or runoff outside the permit area).
