UtahAmerican Energy, Inc.

INCOMING
C0070013
Task ID 2234

July 13, 2005

Pam Grubaugh-Littig
Permit Supervisor
Utah Division of Oil, Gas & Mining
Coal Program
1594 West North Temple, Suite 1210
P.O. Box 145801
Salt Lake City, Utah 84114-5801

Re: UEI # 05-003 Task ID #2022 and 2234 Clean Copies for Incorporation

Dear Ms. Grubaugh-Littig,

With the conditional approval of the above amendment the Division has requested five (5) clean copies of the submittal prepared for incorporation. Attached you will find the five (5) requested clean copies.

A completed C1 and C2 form has been included.

It is UEI's understanding that a stamped incorporated copy of the approved plan will be returned to us for insertion into our copy of the Permit.

Thanks for you help, and if you need any additional information please call.

Sincerely,

R. Jay Marshall

R. Jay Marshall
Project Manager

APPLICATION FOR PERMIT PROCESSING

Permit Change ☐	New Permit ☐	Renewal ☐	Transfer ☐	Exploration ☐	Bond Release ☐	Permit Number: ACT/007/013
Type of Proposal: 05-003, ID# 2234 Clean copies for incorporation.						Mine: Horse Canyon
						Permittee: UtahAmerican Energy, Inc.

Description, include reason for application and timing required to implement:

Instructions: *If you answer yes to any of the first 8 questions (gray), submit the application to the Salt Lake Office. Otherwise, you may submit it to your reclamation*

☐ Yes	☐ No	1. Change in the size of the Permit Area? _____ acres Disturbed Area? _____ acres ☐ increase ☐ decrease.
☐ Yes	☐ No	2. Is the application submitted as a result of a Division Order? DO #
☐ Yes	☐ No	3. Does application include operations outside a previously identified Cumulative Hydrologic Impact Area?
☐ Yes	☐ No	4. Does application include operations in hydrologic basins other than as currently approved?
☐ Yes	☐ No	5. Does application result from cancellation, reduction or increase of insurance or reclamation bond?
☐ Yes	☐ No	6. Does the application require or include public notice/publication?
☐ Yes	☐ No	7. Does the application require or include ownership, control, right-of-entry, or compliance information?
☐ Yes	☐ No	8. Is proposed activity within 100 feet of a public road or cemetery or 300 feet of an occupied dwelling?
☐ Yes	☐ No	9. Is the application submitted as a result of a Violation? NOV #
☐ Yes	☐ No	10. Is the application submitted as a result of other laws or regulations or policies? Explain:
☐ Yes	☐ No	11. Does the application affect the surface landowner or change the post mining land use?
☐ Yes	☐ No	12. Does the application require or include underground design or mine sequence and timing? (Modification of R2P2?)
☐ Yes	☐ No	13. Does the application require or include collection and reporting of any baseline information?
☐ Yes	☐ No	14. Could the application have any effect on wildlife or vegetation outside the current disturbed area?
☐ Yes	☐ No	15. Does application require or include soil removal, storage or placement?
☐ Yes	☐ No	16. Does the application require or include vegetation monitoring, removal or revegetation activities?
☐ Yes	☐ No	17. Does the application require or include construction, modification, or removal of surface facilities?
☐ Yes	☐ No	18. Does the application require or include water monitoring, sediment or drainage control measures?
☐ Yes	☐ No	19. Does the application require or include certified designs, maps, or calculations?
☐ Yes	☐ No	20. Does the application require or include subsidence control or monitoring?
☐ Yes	☐ No	21. Have reclamation costs for bonding been provided for?
☐ Yes	☐ No	22. Does application involve a perennial stream, a stream buffer zone or discharges to a stream?
☐ Yes	☐ No	23. Does the application affect permits issued by other agencies or permits issued to other entities?

X **Attach 5complete copies of the application.**

I hereby certify that I am a responsible official of the applicant and that the information contained in this application is true and correct to the best of my information and belief in all respects with the laws of Utah in reference to commitments, undertakings, and obligations, herein.

8.4.2.6 Revegetation Standards

The post-mining land use is wildlife habitat. The objective is to achieve a plant cover sufficient to control erosion and provide a plant community useful as wildlife habitat. The perennial grasses and forbs growing under the moderating influence of the shrubs will stabilize the soil surface. The shrubs, especially the large rubber rabbitbrush, will provide cover for small animals. Additional wildlife enhancement features include planted pinyon pine and juniper trees and rock piles. All of the plants will provide forage for wildlife, especially in a terrain that is sparsely covered with forage species.

The standard for the revegetation will be the reference site. This site was evaluated in 1985, a normal precipitation year by Susan Hasenyager of Kaiser Coal Corporation. The reference site is a Pinyon-Jupiter Woodland and has ground cover of 26.3% and a diversity of 2 shrubs, 1 forb, and 3 grasses (over 5% relative cover). The composition of the present cover is 83% grasses, 9.7% trees and shrubs, and 6.8% fobs. In the summer of 1991 the reference site will again be sampled by methods found in the DOGM Vegetation Guidelines.

The revegetation will be considered a success when the following conditions are met:

- The plant cover is 90% of the present range site cover at the 90% confidence level.

- When similarity indices are greater or equal to 70% between reclaimed and reference areas. The similarity index (SI) will be determined using the Jaccard equation.

$$SI = \frac{Cover\ (\%)\ for\ LifeForms}{Total\ Vegetation\ Cover\ (\%)}$$

SI = Similarity Index

The revegetation sampling methods are those used to identify the undisturbed plant communities in the Permit Area. The continuity of the sampling method will allow for the ease of comparison of data from the communities and revegetation sites.

The qualitative sampling will take place annually in the summer months. The first year will require monthly visits from April to September to closely follow the progress of the seedlings and plantings. The second year will require visits in the spring and late summer to continue tracking the progress of the seedings and plantings. The visits in years three (3) through ten (10) will occur annually in the summer or be coordinated with the quantitative sampling schedule.

The qualitative sampling will consist of visiting each reclamation treatment area and recording growth, species success, soil conditions, erosion, livestock or wildlife use, insect damage, and other special conditions. The qualitative sampling will incorporate needs identified under the DOGM inspection program.

The quantitative sampling will take place in years two (2), three (3), five (5), nine (9) and ten (10) in the undisturbed communities and the revegetated sites. All of the measurements for cover, diversity, and woody stem densities will be taken in each year scheduled for quantitative sampling. Eighty percent of the measurements for woody stem density at bond release will be taken only from shrubs and trees that have existed for eight consecutive growing seasons. The productive measurements will be taken in years nine (9) and ten (10). The qualitative and quantitative data will be included in the annual reports.

Bi-directional random placement of sampling plots is designed to provide unbiased accuracy of the data compiled. Cover estimates used the Point Intercept method. Transects were run at each revegetation site to determine percent cover. At each sample location, the percent slope, aspect, soil texture and depth, animal use, and other environmental conditions will be recorded.

The density of woody plant species will be sampled by tabulating plants and stems in 100 ft., 10 feet- wide belt transects. This method would be used both in the undisturbed communities and the revegetated sites.

The productivity of each site will be measured by clipping plots along the belt transect. All of the growth for grammnoids and forbs and the annual growth of the shrubs would be clipped.

Sampling adequacy on the revegetated sites and woodland communities would be maintained at 90% of the samples within 10% of the mean. All the revegetated sites would

be sampled individually as defined on the reclamation treatments maps and compared with the results of the undisturbed communities and for sample adequacy. The comparisons will use the one-tailed t-test. Because the post-mining use is wildlife, the revegetation will be considered successful when ground cover and woody plant density are within 90% of the undisturbed communities at a 90% statistical confidence. The stem density on the revegetated sites must meet the goal of 2,000 stems/acre at a 90% statistical confidence in order to be considered successful.

Table 8.4.2.6-1

Reclamation Monitoring Schedule

	Years									
Sampling	1	2	3	4	5	6	7	8	9	10
