

A BLM and State Lands Utility Right-of-Way has been applied for to contain an access road, conveyor, and rail from the existing main line near highway 10, electric power, phone lines, and gas service. This ROW is not included within the MRP and may not fall under the R645 regulations. The facilities are neither planned nor proposed and are only speculative.

This map only shows a potential corridor for some type of overland conveyor-train loadout facility. It is not known where the speculative facility will be built. It is not known who would build the facility, or even if a facility will even be built. It is not known if any of the speculative facility would fall under R645 regulation.
