Subject: snag

Jay,
I wrote this in my last memo:

The Division coordinated with DWR and BLM (June 2004) and both agencies agreed that the Lila Extension area has potential habitat for the Cliff's blazing star, canyon sweetvetch, and creutzfeldt-flower (all BLM candidate and sensitive species). UEI will survey these species at least the year construction begins or one year prior to construction (Section 321.100 pg. 4). The areas with most potential for Cliff's blazing star and creutzfeldt-flower include the proposed surface facilities area and north of the pediment (Section 15). The optimum months to survey Cliff's blazing star and creutzfeldt-flower are late June to middle August and late April to June, respectively. If the results are positive for these species, UEI must immediately submit a protection/mitigation plan as part of Section 333 for these species. UEI must implement the plan prior to disturbance.

Did you survey this year?
