Subject: Fwd:MRP-B updates (resend)

Jay

During our continued review of the Lila Canyon Mine (MRP-B), I re-read your commitment in Section 731.200 to submit baseline water monitoring information at the 5 year permit renewal. I realized that the baseline monitoring schedule mentioned under that section is not identified. As I discussed with you during our meeting at your office on June 8, 2006, you need to identify what parameters will be monitored at the 5 year permit renewal. During our meeting you stated "the monitoring will be the same as operational monitoring, identified in Tables 7-4 and 7-5 as you have already been doing". That information needs to be explained in Section 731.200.

I am also sending you an attachment of a table drafted by Jim Smith. The table identifies maps that need to be checked and updated for water rights locations. Some of their locations are different on the maps. If you have any questions on this matter please call Jim at 801 538-5262.

When submitting this information please include the C1 and C2 forms.

Thanks
David Darby
