4.a Hydrologic Balance: Diversions

All diversions, ditches, and culverts are properly designed with certified drawings. Ditches and culverts appeared to have been recently maintained. A few water bars were filled and needing minimal maintenance. Mr. Newman committed to addressing the issue as quickly as possible. Surface drainage maps are accurate and have been field-truth verified. All culverts ditches and sediment control measures are maintained and cleaned according to a regular schedule. A maintenance checklist is used and was provided to demonstrate diligence in environmental compliance.

4.b Hydrologic Balance: Sediment Ponds and Impoundments

Impoundments have been properly inspected (most recent inspection was complete in fourth quarter, 2013). No hazards or signs of instability were identified at either Pond 1 or Pond 2 during the inspection. Neither pond contained water. All inlets and outlets were functional. The elevations at pond 1 and 2 are 5833.6 and 5834, respectively.

4.c Hydrologic Balance: Other Sediment Control Measures

Silt fences were inspected. Maintenance for all sediment control measures and diversions appeared to be recently completed.

5. Explosives

The Permittee maintains Utah Surface Blaster Certification on file. The certified blaster on file is Dale G. Davis, certification #301. The certification expires on February 18, 2014. Explosive and detonator storage magazines are located on the surface facilities map; they are properly locked and properly maintained.
