Memorandum

To: Office of Surface Mining
 Attention: Mr. Donald A. Crane

From: Area Mining Supervisor

Subject: Water Monitoring Well, American Electric Power, Braztah
 No. 3 Mine, Crandall Canyon, Coal Lease SL-071737

We have reviewed American Electric Power plans to drill a water monitoring well on private surface above Federal coal lease SL-071737.

We have no objection to the proposed plan if all information obtained through the coal zone is submitted to us and an opportunity to examine the core to learn the nature of the overlying rocks is presented.

Upon completion of the monitoring, the coal deposits must be protected by cementing through the coal seams and 50 feet above and below each seam unless the hole bottoms at a lesser distance below the coal seam. We desire to witness the cementing operation.

If the information on the coal from the hole drilled on fee coal can be made available for our records, it would add to our knowledge of the coal field.

We responded on June 15, 1979, to the Utah State Division of Oil, Gas and Mining concerning the subject hole. Perhaps you did not receive a copy of our response.
