Re: Gordon Creek No. 2 Mine
Water System

DIVISION OF
OIL, GAS & MINING

Dear Mr. Smith:

Enclosed please find proposed plans for a modification of the existing water supply system for Gordon Creek No. 2 Mine.

The present supply system for the mine involves pumping through a surface line from Sweets Canyon to the East portals and sump area of No. 2 Mine. The surface flow commonly dries up in the late fall and always freezes up during the winter. The enclosed proposal is simply to make the existing more dependable. This will be accomplished by a shallow collection system to pick up sub-surface flow and pump it to the mine via a buried 4" pipeline. The pipeline will be placed within the existing road. The collection system will be placed near the creek in a presently disturbed area. This area is not presently within our designated permit boundaries. It is our intent to upgrade our mining and reclamation plan to include this system and proposed reclamation of same.

Since our mining will destroy our main sump area in the coming months, it will be nearly impossible to make it through the winter with the existing water source. This letter is a formal request for construction approval of this system. Complete reclamation plans will be forthcoming.

The attached drawings will show present and future configuration of this area along with drainage control.

Thank you for your consideration in this matter. Please contact me if there are any questions or if further information is required.

Respectfully,

BEAVER CREEK COAL COMPANY
