Memo to Coal File:

RE: Beaver Creek Coal Co.  
Gordon Creek # 2 Mine  
ACT/007/016, Folder # 2  
Carbon County, Utah

On Thursday, September 15, 1983, a meeting was held at the Division of Oil, Gas, and Mining between Scott Raymond of Beaver Creek Coal and Tom Munson, Division Hydrologist. The Southwest Lease exploration project was discussed and several key topics were debated and agreements finalized.

Scott Raymond agreed to putting in a catch basin or rather upgrading an existing catch basin in the North Fork of Bryner Canyon. This would allow temporary sediment control to be implemented while construction of the exploration road was taking place, and until finalized sediment control plans could be implemented. It was agreed upon that this temporary sediment control method would be implemented before construction occurred.

THOMAS MUNSON *TM*  
RECLAMATION HYDROLOGIST
