Kevin and Pete:

I have successfully uploaded the Gordon Creek 2, 7 & 8 Water monitoring information into the EDI. During the first quarter, snow depth limited access to all monitoring points except 2-2-W. On the day of the monitoring episode, the snow was still too deep to access the sites but heavy runoff was occurring. This appears to have influenced the TDS and metals concentrations in the sample taken at that site. I would assume the sample from this quarter will yield parameter results more in line with what we normally experience.

Thanks,
Chris
