4.b Hydrologic Balance: Sediment Ponds and Impoundments

Jacob's Pond remains frozen. The elevation of the ice is at the spillway elevation.

4.d Hydrologic Balance: Water Monitoring

Bryner Creek remains snow covered along some of its length; where the creek bed is exposed, no flow was observed. None of the reclamation laterals were flowing. Mr. Chris Hansen, Environmental Manager for the Permittee, notified the Division on March 26, 2012 that the 4th Quarter 2011 surface water monitoring data for the Gordon Creek Mines permit area had been successfully uploaded into the DOGM data base pipeline. No data was reported for surface site 2-2-W, which is the north fork of Bryner Creek below the permit boundary. The sampling location was drifted over with snow and the channel was frozen and covered with several inches of ice. This is consistent with the monthly observations of the Mine site made during the monthly inspections. The review of the 4th quarter data is pending.

9. Protection of Fish, Wildlife and Related Environmental Issues

No wildlife was observed.

12. Backfilling And Grading

Today's inspection was made up to the main forks adjacent to Jacob's Pond. All backfilled areas were observed as stable.

13. Revegetation

Some sprouting of new grass was seen, but the area generally appears dormant.

19. AVS Check

The Permittee recently completed the Division requirement to update the ownership and control information in the Gordon Creek MRP (Task ID # 4047). This was done as part of the Midterm Permit Review.
