### Report summary and status for pending enforcement actions, permit conditions, Division Orders, and amendments:

The mine site is totally reclaimed. No maintenance is required.

The site has been reclaimed in excess of 10 years. The permittee will most likely apply for Phase III bond release this year. They may receive full or partial release depending on decisions the Division will make over last year's disturbance by equipment to reconstruct three diversions. Diversion #1, #2, and the main diversion leaving the site were reconstructed 2015.

I took several pictures above the reclaimed area to give a different perspective.

## **2. Signs and Markers**

I inspected the identification sign and it meets the requirements of the R645 Coal Rules. The sign has all the required information. See Photo

## **3. Topsoil**

All topsoil was used in reclamation of the mine site.

### **4.a Hydrologic Balance: Diversions**

Diversions were open and function as design.

### **4.b Hydrologic Balance: Sediment Ponds and Impoundments**

The cattle pond contains water and appears to be stable.

### **4.c Hydrologic Balance: Other Sediment Control Measures**

The reclaim area is completely pocked. The water is within these pocks and prevents water going off site.

## **12. Backfilling And Grading**

The reclamation site is completely backfilled and graded.

## **13. Revegetation**

Vegetation is starting to come in on the road used for repair of the diversions a couple of years ago. See Photo
