Hydrologist

RE: Technical Review, Beaver Creek Coal Company, Gordon
Creek #3 and #6 Mines, INA/007/017, #2 and #14, Carbon
County, Utah

This memo is to reinforce what we discussed in our team meeting on November 13, 1985 regarding the review of the Gordon Creek #3 and #6 reclamation plan.

The interdisciplinary team meeting to include representatives from the Inspection and Enforcement (I & E) section will be held December 5, 1985 at 9:00 a.m., in Conference Room A. Prior to that meeting, each team member is to have reviewed the mine plan and prepared a draft, hand written Technical Analysis (TA). Any sections which cannot be finalized in the draft TA should be written up as technical deficiencies in paragraph form for incorporation into a letter which we will send posthaste to Beaver Creek Coal Company.

Please assure that you have your sections of the TA written prior to our meeting and any technical deficiencies also prepared so that these may be discussed with other members in the meeting. Please pay special attention to any items which you feel would overlap into other disciplines or be of special interest to I & E individuals. My hope is that this approach will provide a very thorough review of the mine plan from all aspects and eliminate any oversights which might occur should communication not take place between disciplines.

Thank you for your cooperation in this effort.
