3. Topsoil

Evaluated the vegetation at the topsoil storage site. Storage site is depicted on Dwg D 347 in the MRP. The fence surrounding the topsoil piles had been cut allowing grazing animals access. The site was heavily grazed. Evidence indicated that both cows and deer visited the site. The two larger stockpiles of topsoil and substitute topsoil have diverse cover including grasses (western wheatgrass, indian ricegrass, crested wheatgrass) and shrubs (sagebrush). The smaller topsoil pile along the west boundary does not have diverse cover and much of the desirable grasses have been grazed. No forbs or shrubs were present. The fence was repaired during our site visit, but it is recommended that the grazing leasee be advised that his lease does not include the topsoil stockpile. A second recommendation is to reseed the small topsoil pile on the west with a mix that includes shrubs and warm and cold season grasses, to out-compete the invasive cheatgrass.

13. Revegetation

The interim seed mix for the topsoil stockpiles will be reviewed and revised to include shrub cover species and additional grasses. The reclamation plan will also be reviewed by the Division and possibly updated by the permittee.
