re: Act 007/019 - Powerline Minor Amendment

Dear Mr. Demczak:

#2 file

Pursuant to our discussion, I am enclosing various materials for your review and approval of the above referenced minor amendment.

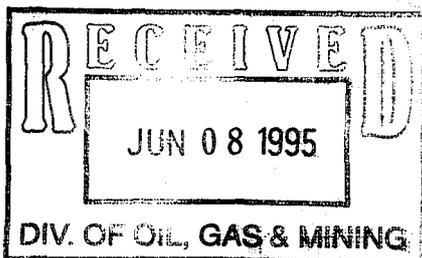

The location plate previously submitted now shows individual small area exemptions (SAE) at each pole location. Each location will have an area of approximately 400 square feet or 0.009 acres (10 poles = 0.09 acres or 0.3% of the disturbed area acreage).

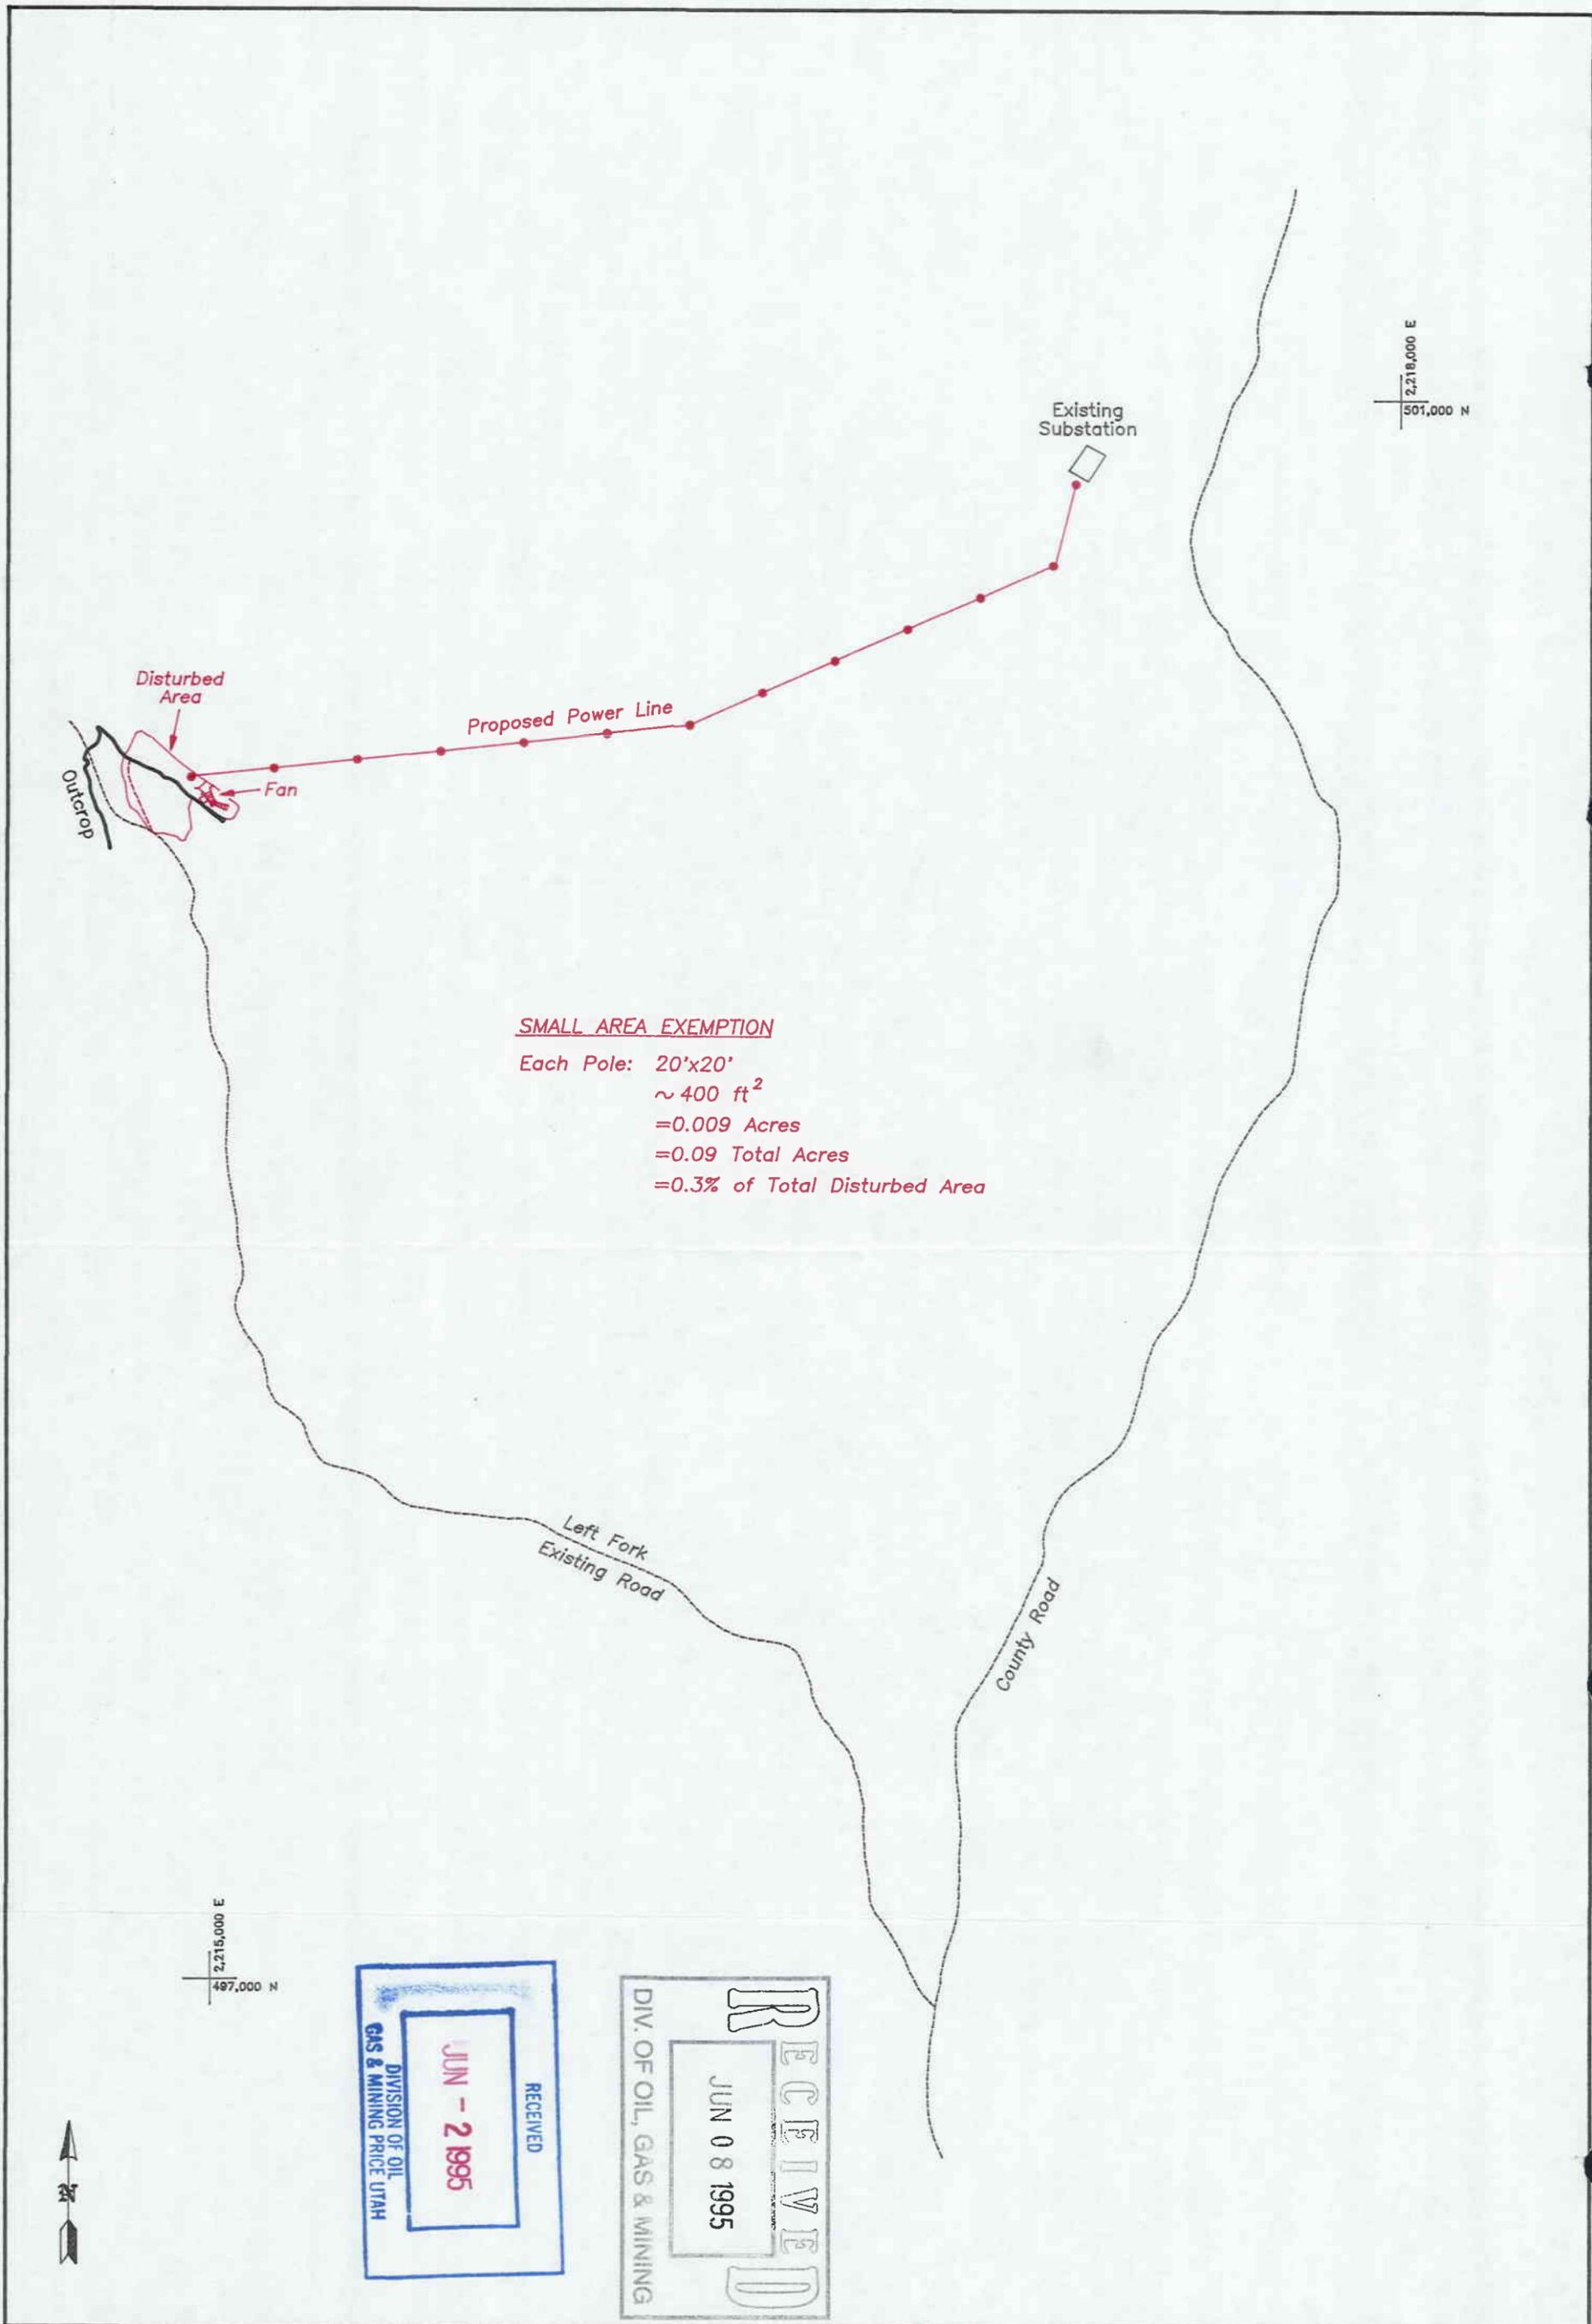

It is clear that these small areas qualify as an SAE. First, these individual areas will be contemporaneously reclaimed (reseeded). Second, there will be no additional sediment contributions because of the size of the area and because the vegetative cover below the pole locations will prevent any contributions. The installation of this powerline will not affect the hydrology in any way. This installation will not interfere with any surface drainage or groundwater and is within the existing permit area. The corridor for the installation will be accessed by foot only; no road building or other construction will take place. All pole holes will be dug by hand and all poles will be set by helicopter.

It should be noted that the cost for the removal of this structure is estimated at \$6,000. The existing bond, which includes an \$11,000 contingency, will more than adequately cover this cost. Please call with any questions.

Sincerely,

Michael W. Glasson
Senior Geologist
