2,220,000 E
504,000 N
2,224,000 E
500,000 N

Outcrop

Note:
Entries will be developed east to the economical mining limit. Pillars will be robbed on retreat.

Note:
Orientation of entries and extent of mining may vary depending on conditions encountered from parting, roof, floor, and coal seam. Width of pillars, number of entries and the barrier pillar width may vary depending on total cover, coal thickness, interburden, and/or other mining conditions.
Main entries and associated barrier pillars will be recovered upon retreat as far as economics and prudent mining practices will allow.

Note:
If Main East is not successful in accessing the upper A Seam otherwise Main East will follow the B Seam as shown on this map.
Coal may vary depending on mining conditions.

Total Dead Volume: 2,480,466 gal/72 hrs ft.
Total Live volume: 15,853,480 gal/40 days ft.
Total Pump Rating: 18,173,946 gal/30.6 days ft.
