#2161*

Dear Pam:

As a supplement to the recently submitted amendment for drilling gob gas vent holes at the Centennial Project, ANDALEX is herewith submitting its request for an expedited review and approval of one of the drill hole sites, specifically GVH #1. As can be seen on the attached map, GVH#1 is located at the east end of Longwall Panel No. 6, which is the panel currently being recovered at the Aberdeen Mine. In order for ANDALEX to safely and successfully complete this longwall panel, and avoid sterilizing reserves, this drill hole must be completed as soon as possible. As can also be seen on the attached map, the proposed drill hole is located on flat lying topography and utilizes existing roads for both access and pad location. This being the case, negligible additional surface disturbance of any kind will be required.

We greatly appreciate the Division's understanding of this critical safety situation and are prepared to assist in the review process in any way possible. Please do not hesitate to contact us with any questions or requirements for information.

Respectfully submitted,

Michael W. Glasson, P.G.
Senior Geologist
