Dave Shaver contacted me today to report that Well #1 has been repaired using a drill crew to ream out an obstruction in the well. The obstruction was encountered at approximately 80 feet below grade. The well drillers reported that the obstruction consisted of a build up of rust, scale and other debris that has accumulated in the well over the years. The good news is that groundwater was encountered at approximately 100 feet below grade. The drillers were planning to reset the pump at this depth so that water monitoring activities could resume for the next scheduled event.
