2. Signs and Markers

Mine identification sign was observed in place at the point on entrance into the permit area from the county road. The identification sign contained the required information

4.a Hydrologic Balance: Diversions

The disturbed culvert outlet below the site has had material removed from in front of the outlet. The culvert still contains sediment. This culvert should be monitored in the future to insure that the material inside of the culvert flushes out during storm events, otherwise it will need to be flushed by the operator to obtain the designed diameter of the culvert.

Metal plates have been placed over top of the hole in the road culvert by the truck load out to prevent the culvert from plugging.

16.a Roads: Construction, Maintenance, Surfacing

The erosional cut in the road leading into the oil storage area has been repaired.
