Hello Mr. Hibbs,

Thanks for the update on the GVH wells. It sounds like most of the wells on the eastern portion of the mountain have been reclaimed or contemporaneously reclaimed. We would like to schedule a field visit within the next few weeks to go out to the site with you or one of your representatives and take a look at what wells still need work. Mildred Cave, the landowner where some of these wells are located has contacted our office inquiring about the wells. She has asked to be included in the site visit. She asked whether these wells on her property are on the construction schedule for this season for reclamation work or are they under contract with OSO (GVH 10, GVH 11, GVH 14, GVH 7, GVH 7A and GVH 3)? During the field visit, we would also like to discuss with you the status or the potential for any future mining/methane extraction activity to occur at the remaining gob vent hole sites.

Here are some proposed dates: July 31, August 1, August 14, or August 15. Could you let me know which of these would fit with your schedule for the site visit? I will then start coordinating the schedule with other Division staffers.

Thanks and look forward to hearing from you.

April

Steve et, al:

The GVH reclamation work is a commitment we require Centennial Mine summarize in the Annual Report. Here is the information we received for the 2011 report:

"GVH sites 1 and 5 have been totally reclaimed. All other active GVH holes are under contract with OSO Energy for commercial met have capture. GVH sites 6, 12 and 13 have been "contemporaneously" reclaimed in 2011. Contemporaneous reclamation of the other sites will resume in 2012, along with full reclamation of undrilled

sites 15, 16 and 17 as per the attached email".

I inspect the disturbance GVH sites once per year in the summer when it is accessible. I am planning to contact David Hibbs about scheduling another site visit to discuss the work that remains and what can be accomplished by the end of the season (in the past this has been dictated by Scamp Construction's schedule). Priscilla - I can also contact Ms. Cave when we schedule a site visit if you could provide me with her contact information.

April,

Attached is an update of Tower GVH reclamation project:

1. All materials have been removed from the mountain.
2. The thistle has been sprayed.
3. Currently reclaiming on GVH 11.
